Solutions for Intelligent Integrated Infrastructure Environments

... Imagine a better future through a real-time integrated software platform:
• Public Utilities Management
• Building Intelligence
• Cost Reduction
• Security
• Resources Optimization
• Better Services to Citizens
• Integrated Management of Infrastructure

Open • Scalable • Affordable

+ 180 countries
+ 125,000 sites Worldwide operating Wonderware Software
+ 1/2 Million software licenses in operations
+ 3000 independent system integrators

25 Years of protecting customer investments.
Imagine how a real-time integrated software platform could change your future!

Imagine a better future. With smooth traffic, sustainable buildings and better-informed citizens.
Imagine a single control room to monitor multiple public infrastructures.
Imagine a higher quality of life. With lean organizations focused on services optimization, cost reduction, operational and maintenance excellence.
You have imagined ArchestrA, the Wonderware Technology that lets you manage your infrastructure as you like in an integrated way.
Turning imagination into reality with Wonderware…

Thanks to Wonderware, you are able to integrate all your infrastructure systems and make them work together in harmony. You are able to manage your entire infrastructure systems from ONE real-time integrated platform.

“Intelligent Integrated Infrastructure Environments” become a reality through:

- An extensive Partner Ecosystem that can deliver your unique solution;
- In-depth knowledge of your Industry;
- Global support & training acting in local language;
- Extensive project management experience that lowers your risk and controls costs;
- A proven & sustainable platform delivering you technology & functional evolution at minimum costs;
- Protecting and extending the value of your current systems investments;
- 25 years as a market leader for easy-to-use software
City of Bremen

“With Wonderware, optimum efficiency of a heating system is achieved after a few months. This level of optimized operation can cut energy consumption by around 15% to 18%.”

Rüdiger Heinenbruch, Technical Operations Manager, Immobilien Bremen, Germany

Université de Strasbourg

“We chose the ArchestrA System Platform to provide a building management system for the equipment in our 140 buildings. The uniqueness of this application lies in the automatic transfer of the information entered in an asset data management program to the ArchestrA System Platform.”

Damien Bertrand, Manager of the Energy Department, Université de Strasbourg, France

AENA

“The centralization of operations that is offered by Wonderware to manage around 700,000 signals is essential for a critical infrastructure like this. We can now quickly respond to incidents and also be proactive in terms of optimising management.”

Jordi Asensi, Head of Systems and Database Management, AENA Barcelona Airport, Spain

Eau de Paris

“For 15 years, InTouch HMI has been supervising water distribution facilities that provide water to 4 million people in Paris. This role has gained strength over the years. For a few months now, InTouch has been animating a large block diagram displayed on a video wall and steering video surveillance applications. This is a move from classic supervision to hypervision.”

Frank Montiel, Head of the Regulation-CTM project in the Information Systems Dept., Eau de Paris, France

So.Ri.Cal.

“With Wonderware, we are able to identify and reduce the wastes and guarantee an increasingly better service while supplying potable water to the entire Calabria region.”

Sergio De Marco, General Director, So.Ri.Cal., Italy

Ambiensys

“Thanks to Wonderware we have been able to develop a one-of-a-kind technology for urban waste management which now allows us to supervise the whole treatment cycle from one control room with complete assurance.”

Luis Carlos Carrillo, Operations Director, Ambiensys, Spain
